

*"red flag" for a
obstructive sleep apnea.*

Normal jaw position, airway open.

Relaxed jaw position causes
tongue and throat tissue to
collapse and narrows the airway.

TAP® maintains forward jaw position
and keeps the AIRWAY OPEN!!!

THORNTON ADJUSTABLE POSITIONER

The goal of the TAP® is to prevent snoring and sleep apnea thereby improving health and quality of life.

The TAP® is a custom adjustable oral appliance that is worn while sleeping. The appliance holds the lower jaw forward, preventing the tongue and soft tissue of the throat from collapsing into the airway.

There is a 96% success rate for people who are treated with the TAP®.

Whether for you or someone you know, the TAP® is the key to better sleep and better health.

*We are proud
to offer our patients
TAP® Therapy.*

The Thornton Adjustable Positioner (TAP®)
is a product of Airway Management, Inc.
